Description

It is a host specific file which shouldn't be touched when you pull new changes.

Instead it should be distributed as config/settings.yaml.example

do you know of a way of removing it from git but not removing the file (for the people who do git pull?)

- Assignee set to Ohad Levy

just run

```
git mv config/settings.yaml config/settings.yaml.example
```

what about the people who already use it? :-\

#4 - 11/27/2009 01:23 PM - Martin Englund

I think you have to put in the release notes to re-create the settings.yaml file, as there is no way to ungit a file and still leave it (as far as I know, but I'm not a git expert, nor do I play one on TV)

#5 - 11/27/2009 02:43 PM - Martin Englund

btw, database.yml should also not be under git control
