Pull request:	
Description	
If a compute profile was selected, the user should not change actual values for the virtual machine parameters.	
Example: Given: compute profile - "Small" that states "1 CPU"	
When: User creates a host with a "Small" compute profile and tries to change the CPU amount to 2	
Then: Either the user shouldn't be able to change the amount of CPU's for this host, or the compute profile should be reset to "Custom"	

History

#1 - 03/05/2015 05:01 AM - Marek Hulán

- Category set to Web Interface

That would be nice UI improvement in host form. Basically when you touch any compute attribute (e.g. change RAM amount) it would reset compute profile. That would also mean that it should not be copied from host group on save.

#2 - 03/05/2015 05:03 AM - Dominic Cleal

- Category changed from Web Interface to Host creation
