Foreman - Bug #9704

Network label is unchanged on additional network interfaces with VMware templates

03/10/2015 02:11 PM - Bryan Kearney

Status:	Closed		
Priority:	Normal		
Assignee:	Ivan Necas		
Category:	Compute resources - VMware		
Target version:	1.10.0		
Difficulty:		**Fixed in Releases:**	
Triaged:		**Found in Releases:**	
Bugzilla link:	1197156	**Red Hat JIRA:**	
Pull request:	https://github.com/theforeman/foreman/pull/2403		

Description

Customer clones host in Vmware ESX cluster from template. Template has two network interfaces. In Sat6 WebUI customer on second network interface selects some network label from the list but newly created host does not get new label but rather stays with the label from template.

Version-Release number of selected component (if applicable):

How reproducible:

Steps to Reproduce:

- in VMware UI define VMware network infrastructure.
- in VMware UI create template based on image. Image must have two or more network interfaces.
- In Sat6 define VMware compute resource and some compute profiles   * Make compute profiles using VMware template defined before
- In satellite6 WebUI go Hosts->New Host.   * Fill all needed parameters.   * Select Deploy on VMware.   * Select Compute Profile
- in Virtual Machine Tab   * in the Network on second interface select any of defined VLANs/Network Labels (must be queried automatically)
- Click Submit.

Associated revisions

Revision 952ad8c1 - 08/26/2015 03:38 AM - Ivan Necas

Fixes #9704,#9705 - ability to customize vmware VM on image-based provisioning

Allows applying the changes form the form to the VM when cloning from a template.

Depends on https://github.com/fog/fog/pull/3570
