Pull request:			

Description

during installation of foreman (or katello-installer) on a system with PE puppet, the installer seems to write to the following directory/files.

```
/var/opt/lib/pe-puppet/foreman_cache_data
/var/opt/lib/pe-puppet/concat/fragments/foreman_settings
/var/opt/lib/pe-puppet/concat/fragments/foreman_settings/01-header.yaml
/var/opt/lib/pe-puppet/concat/output/foreman_settings.out
/var/opt/lib/pe-puppet/foreman_cache_data/admin_password
/var/opt/lib/pe-puppet/foreman_cache_data/ca_key_password
/var/opt/lib/pe-puppet/foreman_cache_data/candlepin_db_password
/var/opt/lib/pe-puppet/foreman_cache_data/db_password
/var/opt/lib/pe-puppet/foreman_cache_data/katello_oauth_secret
/var/opt/lib/pe-puppet/foreman_cache_data/keystore_password-file
/var/opt/lib/pe-puppet/foreman_cache_data/oauth_consumer_key
/var/opt/lib/pe-puppet/foreman_cache_data/oauth_consumer_secret
/var/opt/lib/pe-puppet/foreman_cache_data/post_sync_token
/var/opt/lib/pe-puppet/foreman_cache_data/pulp_node_admin_password
/var/opt/lib/pe-puppet/foreman_cache_data/pulp_password
```

As a result, katello-installer's Puppet instance is unable to find these files, and the install fails. Without Puppet Enterprise agent on the system, the install succeeds.

- Has duplicate Bug #9588: foreman-installer should be able to work with puppet enterprise added

#4 - 05/20/2017 05:46 AM - Anonymous

This should be much easier now with Aio packages being supported, just somebody needs to do it (mainly Pupet module work)

#5 - 10/06/2017 12:17 PM - Ewoud Kohl van Wijngaarden

- Status changed from New to Rejected

This is something that should technically work but I don't think anyone actively wants to support this.
