Description

Hi Ohad,

I am in the process of evaluating Foreman for replacing our existing server build process with kickstart. We are using a bunch or rhel's for production and centos for dev and few redhat VM's for testing.

I have ran into an issue with smartproxy and tftp, when using nfs servers for installation media wget command throws an error as Unsupported scheme.

nfs://10.33.104.213/export/storage/media/centos/centos55/x86_64/images/pxeboot/vmlinuz: Unsupported scheme.

Let me know if you need any further information.
