Foreman - Bug #9938

Allow date formatting / localisation to be configured in Administer -> Settings

03/29/2015 04:59 AM - PixelDrift.NET Support

Description

Currently dates displayed throughout the UI (specifically on the errata page) are formatted m/d/y.

It would be excellent if the date display format was configurable globally with alternative date formats such as 'yyyy-mm-dd', 'dd/mm/yyyy' from the Administer -> Settings menu.

Alternatively, could the date display format be read from the TZ configuration of the host?

- Project changed from Foreman to Katello

- Triaged set to No

Timestamp formats should be following the browser locale by default, unless they have been overridden under your account settings, so we already have a means of configuring this.

Moving to Katello as it's possible this is just an issue with the locale not being respected on the errata page. #9942 also covers an issue seen in Foreman with the locale not being respected there.

#3 - 04/02/2015 12:56 PM - Eric Helms

- Tracker changed from Feature to Bug

- Assignee set to Walden Raines

- Triaged changed from No to Yes

Moving to a bug as the UI should be localized everywhere possible, so there may be areas we missed or didn't think of during reviews.

#4 - 12/21/2015 05:33 PM - Eric Helms

- translation missing: en.field_release set to 114

#5 - 06/24/2016 12:04 PM - Walden Raines

- Project changed from Katello to Foreman

- Status changed from New to Closed

I am seeing dates on the errata page being displayed correctly based on the locale.

En español la fecha se muestra como 27/1/12.

In US English the date is displayed as 1/27/12.

I am closing this bug. If we want a feature to make dates configurable beyond locale settings then please reopen and work with the Foreman team on prioritization.
