

Foreman - Bug #9981

Smart variable doesn't show error on new variable

04/01/2015 02:24 AM - Ori Rabin

Status: Closed	
Priority: Normal	
Assignee: Tom Caspy	
Category: Parameters	
Target version: 1.11.0	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request: https://github.com/foreman/foreman/pull/2693	
Description Steps to reproduce: 1. create a new smart variable with parameter type integer and a matcher with the value 'abc' 2. try to save the puppetclass Expected result: tab becomes red, next to value an error message "is invalid integer" Actual result: the variable disappears and the puppetclass can't be saved Workaround for now: save the puppetclass when the variable is empty (only parameter, type and default value) and then edit. When the variable is updated the validations are shown correctly.

There are, in fact, two issues here.

1. If you don't enter a key then it saves the puppet class but does not attempt to save the new smart variable at all and spits you out on the puppetclasses list page
2. If you enter a key and also enter an invalid default value (a string for an int, for example) then the form marks itself as invalid but does not specify what the actual issue is
